

About Project

The aim of Event Management System is to develop an online event service portal for customers to view and book the event type and the decoration needed for the event. The main objective of this web portal is to provide customer services to make special days more memorable without any burden on customers. At, same time the customers can also check the available dates for the event, including the cost, capacity of hall and book the appointments accordingly.

1. Who is the application for?

This web application is for customers to provide service according to their interests and their day memorable.

2. What problems will it solve?

This application reduces the manual effort of the people who host their parties.

3. Where will it be used?

This web application is used anywhere for booking and celebrating an event in an easy way.

4. When is it needed?

This application is needed by Customers to make their work easier.

5. How will it work?

Initially, the Customer must create an account and book an event about decoration, make payment for their orders, after completion of payment the event manager will contact you and make the preparations for the event on the date it is scheduled accordingly.
